Web Campers are hard at work. FRONT ROW: Maya, Lukas, Tushar, and Matthew.
BACK ROW: Brandon, Henry, Counselor Matt, and Jonah.

Campers Prove Coding is the Coolest!

Latin Web Development Summer Camp went incredibly well this past week. Seven intrepid campers took time out of their busy summer schedules to learn and explore HTML and CSS code, i.e. Hyper Text Markup Language and Cascading Style Sheets, respectively.

Instructor Andy Stone led our campers through a series of web code examples, tutorials, and challenges. All of our campers were up to the challenge and proved to be quick learners. Topics covered included: Reviewing basic HTML and CSS tags, fixing bugs of existing webpages, using code to determine layout, incorporating java-scripts and animation, and designing an on-line newsletter webpage.

Web camp proved to be fun, challenging, and a great steppingstone for future pursuits in coding and web design. When we weren't coding, we were at the pool or playing a variety of fun games like Sharks and Minos, Kickball, SPUD, Flinch, and Squirt. There were several occasions when our campers were more excited about coding than going to lunch or free time! That's a sign of a dedicated coder, committed to his/her task at hand!

Thanks for a great Web camp!
Hope to see you next summer!

Cheers!

Andy & Matt
